

CWAUG October 2006 Meeting Demonstration

Central WI Apple Users Group welcomed Prosoft Engineering representatives Gordon and Jennifer Bell at the October meeting. The rewarding presentation on the latest back up technologies, maintaining, optimizing, and managing Macintosh hard drives took place at one of the Marshfield Airport hangars in order to accommodate the anticipated large amount of Mac users.

The mug was surprised to find out the Apple Corporation is using these same software packages on their latest line of computers. The Data Rescue software is also primarily used by Drive Savers technologies, the familiar resource for sending in frozen Mac drives.

Picture Rescue, a program for rescuing digital pictures from a corrupt camera, flash drive, USB or fire wire cameras, was thoroughly explained by Jennifer their marketing director. Gordon noted the same company has created the latest software for tuning your iPod called Tune Tech.

Quite a few of CWAUG members purchased the software packages at a considerable discount. The web address of this outstanding multiple technologies company is prosoftengineering.com At the close of the meeting a raffle prize of a 160 gb LaCie hard drive was given away to one of our users. Duffy's Aircraft Service Sales and Leasing Company provided plenty of refreshments and tasty treats. The well planned demonstration and main highlight of the year presentation was made possible from the excellent corporation of Central WI Apple Users Group members and friends.
